History:

The Armed freighter was one of the largest ships the Bajoran's had in their fleet. During the occupation many of these were pressed into service as military ships against the Cardassian's. During this period many of them suffered from a lack of dry dock facilities which meant that systems such as the warp drive would fail and be left in a state of disrepair. The USS Enterprise encounters one of these vessels and discovers that it is called an Antares class.

History:

The Bajoran Militia used these vessels as troop transports and attack craft. They started out life as freighters however due to lack of resources after the occupation the militia had to make do with what it could get its hands on. Once again it would appear that these vessels have a warp drive but it seems to be defunct.
