History:

The YT 1-300 was a replica starship design based heavily on a popular movie franchise which the starship designer was fond of. The vessel was equipped with a Klingon warp drive similar to that found on a Bird of Prey. Her designer was an Andorian who had developed a fondness for old earth science fiction whilst studying warp field mechanics at the academy. Normally such a design would be relegated to fancy however Shredan and his friends broke protocol and helped attack the Borg during the battle for Sector 001.

The Command module for the vessel was an obsolete inspection pod .
