### MISCELLANEOUS DATA

maneuver modifiers: +4 C, +0 H, +2 T  
traits: \*Carrier, Prototype (+0-; pulse phasers), Pulse Weapon Upgrade (pulse phasers; reflected above), Design Defect (pulse phasers; reflected above), Intricate system (life support, operations), Enhanced System (sensors), Flagship (+2 C; reflected above)

\***Carrier:** The vessel has been designed to function as a carrier, for either multiple shuttle-craft, a large compliment of runabouts, or even a squadron or two of Starfighters.

**Effect:** A Carrier will have x2 the space of a non-carrier of equivalent size, but this extra space must be used to accommodate the ship's carrier status (extra shuttlebays, space for fighters, etc.). ie. a Size-10 carrier would have 330 space, but with 165 points allocated to picks for things such as shuttlebays, fighterbays, etc., and still 165 points to build the basic ship (weapons, life support, sensors, etc.). This trait can be chosen multiple times to build a high-capacity carrier, but each additional pick only serves to add x1 to the space. ie. a Size-10 ship (which begins with 165 points of space) doubles its space (330) with one pick of "Carrier", and on a second pick would have 495 points of space, 660 on three picks, etc.
